MEMORANDUM TO: Gary Taverman  
Deputy Assistant Secretary  
for Antidumping and Countervailing Duty Operations,  
performing the non-exclusive functions and duties of the  
Assistant Secretary for Enforcement and Compliance

FROM: James Maeder  
Associate Deputy Assistant Secretary  
for Antidumping and Countervailing Duty Operations  
performing the duties of Deputy Assistant Secretary for  
Antidumping and Countervailing Duty Operations

SUBJECT: Decision Memorandum for Preliminary Results of Antidumping Duty Administrative Review: Stainless Steel Butt-Weld Pipe Fittings from Italy; 2016-2017

SUMMARY

The Department of Commerce (Commerce) is conducting an administrative review of the antidumping duty order on stainless steel butt-weld pipe fittings from Italy, at the request of the sole respondent company, Filmag Italia Spa (Filmag). No other interested party requested an administrative review. The period of review is February 1, 2016, through January 31, 2017. We preliminarily find that Filmag has not sold subject merchandise at less than normal value during the period of review.

Based on the final results of this administrative review, the Department will instruct U.S. Customs and Border Protection (CBP) to assess duties on all appropriate entries of subject merchandise during the POR. The preliminary rates assigned to each of these companies can be found in the “Preliminary Results of Review” section of the accompanying Federal Register notice.

Interested parties are invited to comment on these preliminary results. We intend to issue the final results, which will include the results of verification and our analysis of all issues raised in the case briefs, no later than 120 days from the date of publication of this notice, unless extended, pursuant to section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act).
Background

On February 8, 2017, Commerce published a notice of opportunity to request an administrative review of the order on stainless steel butt-weld pipe fittings from Italy.\(^1\) Filmag, the only party that requested a review during this period of review, filed a request for a review of its own sales on February 25, 2017, pursuant to section 751(a)(1) of the Act and 19 CFR 351.213(b)(1), and we initiated this review on April 10, 2017.\(^2\) Therefore, Commerce is reviewing all exporters/producers for which a review was requested. On October 31, 2017, we extended the time limit for completion of the preliminary results of the review to no later than January 2, 2018.\(^3\) We extended the time limit to February 28, 2018, on December 28, 2017.\(^4\) As explained in the memorandum from the Acting Assistant Secretary for Enforcement and Compliance, Commerce has exercised its discretion to toll all administrative deadlines due to the recent closure of the Federal Government. All deadlines in this segment of the proceeding have been extended by three business days. The revised deadline for the preliminary results of this review is now March 5, 2018.\(^5\)

Filmag submitted responses to Commerce’s antidumping duty questionnaire on May 30, 2017 (response to section A)\(^6\) and on June 21, 2017 (response to sections B, C, and D).\(^7\) Filmag filed responses to supplemental questionnaires, dated from January 15, 2018, through January 27, 2018.\(^8\)

Scope of the Order

For purposes of the order, the product covered is certain stainless steel butt-weld pipe fittings. Stainless steel butt-weld pipe fittings are under 14 inches in outside diameter (based on nominal pipe size), whether finished or unfinished. The product encompasses all grades of stainless steel and “commodity” and “specialty” fittings. Specifically excluded from the definition are threaded, grooved, and bolted fittings, and fittings made from any material other than stainless steel.

\(^1\) See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review, 82 FR 9709 (February 8, 2017).
\(^3\) See Memorandum to James Maeder, Senior Director performing the duties of Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, from John Drury, International Trade Compliance Analyst, on the subject of “Stainless Steel Butt-Weld Pipe Fittings from Italy: Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review; 2016-17,” dated October 31, 2017.
\(^5\) See Memorandum to the file from Christian Marsh, Deputy Assistant Secretary for Enforcement and Compliance performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance regarding “Deadlines Affected by the Shutdown of the Federal Government,” dated January 23, 2018.
\(^7\) See Letter from Filmag to Commerce, “Stainless steel butt weld pipe fittings from Italy; §B,C,D QR” dated June 21, 2017 (Sections B-D response).
\(^8\) See Letters from Filmag to Commerce, “Stainless steel butt weld pipe fittings from Italy; SQR #1,” dated January 15, 2018, and “Stainless steel butt weld pipe fittings from Italy; SQR #2,” dated January 24, 2018,
The butt-weld fittings subject to the order are generally designated under specification ASTM A403/A403M, the standard specification for Wrought Austenitic Stainless Steel Piping Fittings, or its foreign equivalents (e.g., DIN or JIS specifications). This specification covers two general classes of fittings, WP and CR, of wrought austenitic stainless steel fittings of seamless and welded construction covered by the latest revision of ANSI B16.9, ANSI B16.11, and ANSI B16.28. Butt-weld fittings manufactured to specification ASTM A774, or its foreign equivalents, are also covered by the order.

The order does not apply to cast fittings. Cast austenitic stainless steel pipe fittings are covered by specifications A351/A351M, A743/743M, and A744/A744M.

The butt-weld fittings subject to the order is currently classifiable under subheading 7307.23.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading is provided for convenience and customs purposes, the written description of the scope of the order is dispositive.

DISCUSSION OF THE METHODOLOGY

Comparisons to Normal Value

To determine if Filmag’s sales of the subject merchandise from Italy to the United States were made at less than normal value, Commerce compared the export prices to the normal value, pursuant to section 773(a)(1)(B) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.414(c)(1) and (d) and as described in the “Export Price” and “Normal Value” sections below.

Product Comparisons

In accordance with section 771(16) of the Act, we considered all products produced and sold by Filmag in the home market during the period of review that fit the description in the “Scope of the Order” section of this memorandum to be foreign like products for purposes of determining appropriate product comparisons to U.S. sales. Pursuant to 19 CFR 351.414(f), we compared U.S. sales of SSBW pipe fittings to sales of SSBW pipe fittings made in the home market, within the contemporaneous window period, which extends from three months prior to the month of the first U.S. sale until two months after the month of the last U.S. sale. Where there were no sales of identical merchandise in the home market made in the ordinary course of trade to compare to U.S. sales, we compared U.S. sales to sales of the most similar foreign like product made in the ordinary course of trade.

In making product comparisons, we compared products based on the physical characteristics established by Commerce and reported by the respondent in the following order of importance: (1) the type of fitting; (2) the grade of steel; (3) the type of feedstock used in the production of the fitting; (4) the nominal pipe sizes of the larger and, if applicable, smaller openings; and, (5) the wall thickness of the pipe. As a result, we found that Filmag had reported contemporaneous
sales of foreign like product that, although not identical, were similar to the subject merchandise sold in the United States during the period of review.

A. Determination of Comparison Method

Pursuant to 19 CFR 351.414(b) and (c)(1), Commerce calculates dumping margins by comparing weighted-average normal values to weighted-average export prices (or constructed export prices) (the average-to-average method) unless the Secretary determines that another method is appropriate in a particular situation. Commerce’s regulations also provide that dumping margins may be calculated by comparing normal values, based on individual transactions, to export prices of individual transactions (transaction-to-transaction method) or, when certain conditions are satisfied, by comparing weighted-average normal values to export prices of individual transactions (average-to-transaction method).\textsuperscript{9} In recent antidumping investigations, Commerce applied a “differential pricing” (DP) analysis for determining whether application of the average-to-average comparison method is appropriate in a particular situation pursuant to 19 CFR 351.414(c)(1).\textsuperscript{10} Commerce may determine that, in particular circumstances, consistent with section 777A(d)(1)(B) of the Act, it is appropriate to use the average-to-transaction method. Commerce will continue to develop its approach in this area based on comments received in this proceeding and others, and on its additional experience with addressing the potential masking of dumping that can occur when Commerce uses the average-to-average method in calculating weighted-average dumping margins.

The DP analysis used in these preliminary results requires a finding of a pattern of export prices for comparable merchandise that differ significantly among purchasers, regions, or time periods. If such a pattern is found, then the DP analysis evaluates whether such differences can be taken into account when using the average-to-average method to calculate the weighted-average dumping margin. The DP analysis used here evaluates all purchasers, regions, and time periods to determine whether a pattern of significant price differences exists. The analysis incorporates default group definitions for purchasers, regions, time periods, and comparable merchandise. Purchasers are based on the customer codes reported by Filmag. Regions are defined using the reported destination code (e.g., zip codes) and are grouped into regions based upon standard definitions published by the U.S. Census Bureau. Time periods are defined by the quarter within the period of review being examined based upon the reported date of sale. For purposes of analyzing sales transactions by purchaser, region, and time period, comparable merchandise is considered using the product control number and any characteristics of the sales, other than purchaser, region, and time period, that Commerce uses in making comparisons between export price and normal value for the individual dumping margins.

In the first stage of the DP analysis used here, the “Cohen’s $d$ test” is applied. The Cohen’s $d$ test is a generally recognized statistical measure of the extent of the difference between the mean of a test group and the mean of a comparison group. First, for comparable merchandise, the Cohen’s $d$ coefficient is calculated when the test and comparison groups of data each have at

\textsuperscript{9} See 19 CFR 351.414(b)(1)-(2).

\textsuperscript{10} See also Xanthan Gum From the People’s Republic of China: Final Determination of Sales at Less Than Fair Value, 78 FR 33350 (June 4, 2013) (Xanthan Gum from the PRC), and the accompanying Issues and Decision Memorandum at Comment 3.
least two observations, and when the sales quantity for the comparison group accounts for at least five percent of the total sales quantity of the comparable merchandise. Then, the Cohen’s $d$ coefficient is used to evaluate the extent to which the net prices to a particular purchaser, region or time period differ significantly from the net prices of all other sales of comparable merchandise. The extent of these differences can be quantified by one of three fixed thresholds defined by the Cohen’s $d$ test: small, medium or large. Of these thresholds, the large threshold (i.e., 0.8) provides the strongest indication that there is a significant difference between the means of the test and comparison groups, while the small threshold provides the weakest indication that such a difference exists. For this analysis, the difference was considered significant and the sales were found to pass the Cohen’s $d$ test if the calculated Cohen’s $d$ coefficient is equal to or exceeds the large threshold.

Next, the “ratio test” assesses the extent of the significant price differences for all sales as measured by the Cohen’s $d$ test. If the value of sales to purchasers, regions, and time periods that pass the Cohen’s $d$ test accounts for 66 percent or more of the value of total sales, then the identified pattern of export prices that differ significantly supports the consideration of the application of the average-to-transaction method to all sales as an alternative to the average-to-average method. If the value of sales to purchasers, regions, and time periods that pass the Cohen’s $d$ test accounts for more than 33 percent and less than 66 percent of the value of total sales, then the results support consideration of the application of the average-to-transaction method to those sales identified as passing the Cohen’s $d$ test as an alternative to the average-to-average method and application of the average-to-average method to those sales identified as not passing the Cohen’s $d$ test. If 33 percent or less of the value of total sales passes the Cohen’s $d$ test, then the results of the Cohen’s $d$ test do not support consideration of an alternative to the average-to-average method.

If both tests (i.e., the Cohen’s $d$ test and the ratio test) demonstrate, in the first stage, the existence of a pattern of export prices that differ significantly, such that an alternative comparison method should be considered, then, in the second stage of the DP analysis, we examine whether using only the average-to-average method can appropriately account for such differences. In considering this question, Commerce tests whether using an alternative method, based on the results of the Cohen’s $d$ and ratio tests described above, yields a meaningful difference in the weighted-average dumping margin as compared to that resulting from the use of the average-to-average method only. If the difference between the two calculations is meaningful, then this demonstrates that the average-to-average method cannot account for differences such as those observed in this analysis and, therefore, an alternative method would be appropriate. A difference in the weighted-average dumping margins is considered meaningful if: (1) there is a 25 percent relative change in the weighted-average dumping margin between the average-to-average method and the appropriate alternative method where both rates are above the de minimis threshold, or (2) the resulting weighted-average dumping margin moves across the de minimis threshold.

Interested parties may present arguments and justifications in relation to the above-described DP approach used in these preliminary results, including arguments for modifying the group definitions used in this proceeding.
B. Results of Differential Pricing Analysis

Based on the results of the DP analysis for this review, Commerce finds that the value of total sales for Filmag that passed the Cohen’s $d$ test was less than 33 percent, and, as such, these results do not confirm the existence of a pattern of export prices for comparable merchandise that differ significantly among purchasers, regions, or time periods. Thus, the results do not support consideration of an alternative to the average-to-average method. Accordingly, Commerce has preliminarily determined to use the average-to-average method in making comparisons between export prices and normal values for Filmag in this review.11

Date of Sale

Section 351.401(i) of Commerce’s regulations states that, in identifying the date of sale of the merchandise under consideration or foreign like product, Commerce normally will use the date of invoice, as recorded in the exporter’s or producer’s records kept in the ordinary course of business. Additionally, Commerce may use a date other than the date of invoice if Commerce is satisfied that a different date better reflects the date on which the exporter or producer establishes the material terms of sale.12 Commerce has a long-standing practice of finding that, where shipment date precedes invoice date, shipment date better reflects the date on which the material terms of sale are established.13

Throughout its questionnaire responses, Filmag reported the invoice date as the date of sale in both the home and U.S. markets. However, in the home market, Filmag stated that the shipment date often preceded the invoice date.14 Filmag explained that only the delivery documents usually were created when the shipment was ready for pick-up from the factory and that invoicing occurs at a later date.15 By contrast, Filmag stated that invoicing for U.S. sales must occur prior to or at the time of shipment because this document must accompany the shipment through customs.16 Based on this information and our practice, we preliminarily find that, in the home market, the date of shipment best reflects the date on which material terms of sales were established for purposes of this review when the date of shipment precedes the date of invoice. Otherwise, we preliminarily find that the invoice date is the appropriate date of sale. For U.S. sales, we preliminarily find that the date of invoice is the date in which the material terms of sale are finalized and, thus, is the appropriate date of sale.

---

11 In these preliminary results, Commerce applied the weighted-average dumping margin calculation method adopted in Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification, 77 FR 8101 (February 14, 2012). In particular, the Department compared monthly weighted-average export prices with monthly weighted-average normal values and granted offsets for non-dumped comparisons in the calculation of the weighted-average dumping margin.

Export Price

Section 772(a) of the Act defines export price as “the price at which the subject merchandise is first sold (or agreed to be sold) before the date of importation by the producer or exporter of subject merchandise outside of the U.S. to an unaffiliated purchaser in the United States or to an unaffiliated purchaser for exportation to the U.S., as adjusted under subsection (c).” In accordance with section 772(a) of the Act, we used the export-price methodology for Filmag because the first sale to an unaffiliated party was made before the date of importation and the use of constructed export prices was not otherwise warranted.

We calculated export price based on the packed price that Filmag charged to the first unaffiliated purchaser in the United States. We made adjustments, where appropriate, from the starting price for movement expenses (e.g., brokerage and handling expenses in the United States, international freight expenses, marine insurance expenses and U.S. customs duties), in accordance with section 772(c)(2)(A) of the Act. We also made adjustments, where appropriate, for imputed credit and certain direct selling expenses.

Normal Value

A. Home Market Viability

In order to determine whether there was a sufficient volume of sales in the home market to serve as a viable basis for calculating normal value (i.e., whether the aggregate volume of home market sales of the foreign like product was equal to or greater than five percent of the aggregate volume of U.S. sales),17 we compared the volume of Filmag’s home-market sales to the volume of its U.S. sales of subject merchandise, in accordance with section 773(a)(1)(B) of the Act. Based on this comparison, we determined that the company’s aggregate volume of home market sales of the foreign like product was greater than the five-percent threshold and, therefore, we used the home market sales as the basis for normal value in this review.

B. Level of Trade

In accordance with section 773(a)(1)(B)(i) of the Act,18 Commerce, to the extent practicable, determines normal value based on sales in the comparison market made at the same level of trade as the export price or constructed export price sales. Pursuant to 19 CFR 351.412(c)(l)(iii), the normal-value level of trade is based on the starting price of the sales in the comparison market or, when normal value is based on constructed value, the starting price of the sales from which we derive selling, general, and administrative (SG&A) expenses and profit. In identifying levels of trade for export price and comparison-market sales, we consider the starting prices before any

---

17 See 19 CFR 351.404(b)(2).
adjustments. For export price, the level of trade is based on the starting price, which is usually the price from the exporter to the importer.

To determine whether comparison-market sales are at a different level of trade than export price sales, we examine stages in the marketing process and selling functions along the chain of distribution between the producer and the unaffiliated customer. If the comparison-market sales are at a different level of trade and the difference affects price comparability, as manifested in a pattern of consistent price differences between the sales on which normal value is based and the comparison-market sales at the level of trade of the export transaction, we make a level-of-trade adjustment under section 773(a)(7)(A) of the Act.

In its questionnaire responses, Filmag made no distinction in selling functions based on channels of distribution or customer categories, and stated there was only one channel of trade applicable to both the home and U.S. market. Based on a review of the selling activities Filmag performed for customers in each market, we preliminarily find that Filmag only had one level of trade in the home and U.S. markets. Because there was only one level of trade in the home market, we were unable to calculate a level-of-trade adjustment. Therefore, for these preliminary results, we matched the export-price sales to home-market sales without making a level-of-trade adjustment to normal value. For a more detailed description of our level-of-trade analysis, see Memorandum to the File from John K. Drury, International Trade Compliance Analyst, regarding “Filmag Italia S.p.A. – Analysis Memorandum for the Preliminary Results of the 2016/2017 Administrative Review of Stainless Steel Butt-Weld Pipe Fittings from Italy,” dated concurrently with this memorandum.

C. Cost of Production

Pursuant to section 773(b)(2) of the Act, Commerce required that Filmag provide constructed-value and cost of production (COP) information to determine if there were reasonable grounds to believe or suspect that sales of foreign like product had been made at prices that represented less than the COP of the product.

---

19 See Section 773(a)(1)(B)(i) of the Act.
20 See 19 CFR 351.412(c)(1)(i).
21 See 19 CFR 351.412(c)(2).
22 See Sections B-D response at 22 and 66; Section A response at 15 – 18.
23 On June 29, 2015, the President of the United States signed into law the Trade Preferences Extension Act of 2015 (TPEA), which made numerous amendments to the AD and CVD law, including amendments to section 773(b)(2) of the Act, regarding Commerce’s requests for information on sales at less than cost of production. See Trade Preferences Extension Act of 2015, Pub. L. No. 114-27, 129 Stat. 362 (2015) (TPEA). The 2015 law does not specify dates of application for those amendments. On August 6, 2015, Commerce published an interpretative rule, in which it announced the applicability dates for each amendment to the Act, except for amendments contained to section 771(7) of the Act, which relate to determinations of material injury by the ITC. See Dates of Application of Amendments to the Antidumping and Countervailing Duty Laws Made by the Trade Preferences Extension Act of 2015, 80 FR 46793 (August 6, 2015) (Applicability Notice). The amendments to the Act are applicable to all determinations made on or after August 6, 2015, but, because in this review questionnaires had been issued prior to the applicability date, these specific amendments do not apply to this review. Id., 80 FR at 46794-95. The 2015 amendments may be found at https://www.congress.gov/bill/114th-congress/house-bill/1295/text/pl.
1. Calculation of Cost of Production

We calculated the COP for the respondents based on the sum of the cost of materials and fabrication for the foreign like product, plus amounts for SG&A expenses and packing, in accordance with section 773(b)(3) of the Act. We relied on the COP data submitted by Filmag, with adjustments.

2. Test of Comparison Market Sales Prices

On a product-specific basis, we compared the adjusted weighted-average COP to the per-unit price of the comparison-market sales of the foreign like product to determine whether these sales had been made at prices below the COP. In particular, in determining whether to disregard home-market sales made at prices below the COP, we examined whether such sales were made within an extended period of time in substantial quantities and at prices which permitted the recovery of all costs within a reasonable period of time, in accordance with sections 773(b)(2)(B), (C), and (D) of the Act. For purposes of this comparison, we used COP exclusive of selling and packing expenses. The prices were net of billing adjustments, discounts, movement expenses, direct and indirect selling expenses, and packing expenses, where appropriate.

3. Results of the Cost of Production Test

Section 773(b)(1) of the Act provides that, where sales made at less than the COP “have been made within an extended period of time in substantial quantities” and “were not at prices which permit recovery of all costs within a reasonable period of time,” Commerce may disregard such sales when calculating normal value. Pursuant to section 773(b)(2)(C)(i) of the Act, we did not disregard below-cost sales that were not made in “substantial quantities,” i.e., where less than 20 percent of sales of a given product were made at prices less than the COP. We disregarded below-cost sales when they were made in substantial quantities, i.e., where 20 percent or more of a respondent’s sales of a given product were at prices less than the COP and where “the weighted average per unit price of the sales . . . is less than the weighted average per unit cost of production for such sales.”

Finally, based on our comparison of prices to the weighted-average COPs, we considered whether the prices would permit the recovery of all costs within a reasonable period of time.

For Filmag, the cost test indicated that, for home market sales of certain products, more than 20 percent were sold at prices below the COP within an extended period of time and were at prices which would not permit the recovery of all costs within a reasonable period of time. Thus, in accordance with section 773(b)(1) of the Act, we disregarded these below-cost sales as outside of the ordinary course of trade in our analysis of the companies’ home-market sales data and used the remaining sales to determine normal value.

---

26 See section 773(b)(2)(D) of the Act.
D. Calculation of Normal Value Based on Comparison Market Prices

We calculated normal value for Filmag based on the reported ex-factory prices to unaffiliated customers in the comparison market. Where appropriate, we made circumstance-of-sale adjustments (i.e., credit expenses), pursuant to section 773(a)(6)(C)(iii) of the Act and 19 CFR 351.410(b). We added U.S. packing costs and deducted home market packing costs, in accordance with sections 773(a)(6)(A) and (B)(i) of the Act.

When comparing U.S. sales with home-market sales of similar, but not identical, merchandise, we also made adjustments for physical differences in the merchandise in accordance with section 773(a)(6)(C)(ii) of the Act and 19 CFR 351.411. We based this adjustment on the difference in the variable costs of manufacturing of the foreign like product and subject merchandise.27

E. Price-to-Constructed Value Comparison

As noted in the “Product Comparisons” section above, we found that Filmag reported sales of foreign like product that, although not identical, was similar to the subject merchandise sold in the United States. Consequently, it was not necessary in our price comparisons to base normal value on constructed value, pursuant to section 773(a)(4) of the Act.

Currency Conversion

We made currency conversions to U.S. dollars in accordance with section 773A(a) of the Act and 19 CFR 351.415, based on exchange rates, as certified by the Federal Reserve Bank, in effect on the dates of the U.S. sales. These rates are available on the Enforcement and Compliance’s website at http://enforcement.trade.gov/exchange.

27 See 19 CFR 351.411(b).
Recommendation

We recommend applying the above methodology for these preliminary results.
