July 28, 2017

MEMORANDUM TO:         Gary Taverman
                          Deputy Assistant Secretary
                          for Antidumping and Countervailing Duty Operations,
                          Performing the non-exclusive functions and duties of the
                          Assistant Secretary for Enforcement and Compliance

FROM:                    James Maeder
                          Senior Director
                          performing the duties of Deputy Assistant Secretary
                          for Antidumping and Countervailing Duty Operations

SUBJECT:                 Decision Memorandum for Preliminary Results and Partial
                          Rescission of Antidumping Duty Administrative Review:
                          Polyethylene Terephthalate Film, Sheet, and Strip from Taiwan;
                          2015-2016

Summary

The Department of Commerce (the Department) is conducting an administrative review of the
antidumping duty order on polyethylene terephthalate film, sheet, and strip (PET film) from
Taiwan. This review covers respondent Nan Ya Plastics Corporation (Nan Ya). The period of
review (POR) is July 1, 2015, through June 30, 2016. We preliminarily find that Nan Ya sold
PET film in the United States below normal value (NV). In addition, we are rescinding the
review with respect to Shinkong Materials Technology Corporation (SMTC).

If these preliminary results are adopted in the final results of this review, we will instruct U.S.
Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries
of subject merchandise during the POR. Interested parties are invited to comment on these
preliminary results. Unless the deadline is extended pursuant to section 751(a)(3)(A) of the
Tariff Act of 1930, as amended (the Act), we will issue the final results no later than 120 days after the publication of these preliminary results.

Background

In July 2002, the Department published in the Federal Register an antidumping duty order on PET film from Taiwan.1 Subsequently, on July 5, 2015, the Department published in the Federal Register a notice of opportunity to request an administrative review of the antidumping duty order on PET film from Taiwan for the period July 1, 2015, through June 30, 2016.2 On August 1, 2016, in accordance with section 751(a)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.213(b)(1), the petitioners3 requested reviews of Nan Ya and SMTC.4 On September 12, 2016, in accordance with 19 CFR 351.221(c)(1)(i), the Department published a notice of initiation of administrative review of the antidumping duty order on PET Film from Taiwan.5

On September 30, 2016, SMTC submitted a letter stating that it did not make any shipments during the POR and requested the Department to rescind the review in accordance with 19 CFR 351.213(d)(3) with respect to SMTC for reason of no shipments.6 On October 6, 2016, the Department placed CBP data on the record.7 None of the parties made comments on the CBP data. On October 13, 2016, we issued the AD questionnaire to Nan Ya, who submitted its responses in November and December 2016.8 On December 12, 2016, the petitioners withdrew their request for review with respect to SMTC.9

On March 7, 2017, in accordance with section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), the Department extended the due date for the preliminary results by an additional

90 days (from April 3, 2017) to July 3, 2017.\textsuperscript{10} On June 30, 2017, in accordance with section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), the Department extended the due date for the preliminary results by an additional 30 days to July 31, 2017.\textsuperscript{11}

Partial Rescission

On December 12, 2016, the petitioners withdrew their request for review with respect to SMTC. Since the request withdrawal was timely filed and no other party requested a review, we are rescinding this administrative review with respect to SMTC, pursuant to 19 CFR 351.213(d)(1). Accordingly, the only company that remains subject to the instant review is Nan Ya.

Scope of the Order

The products covered by the antidumping duty order are all gauges of raw, pretreated, or primed PET film, whether extruded or coextruded. Excluded are metalized films and other finished films that have had at least one of their surfaces modified by the application of a performance-enhancing resinous or inorganic layer of more than 0.00001 inches thick. Imports of polyethylene terephthalate film, sheet, and strip are currently classifiable in the Harmonized Tariff Schedule of the United States (HTSUS) under item number 3920.62.00.90. HTSUS subheadings are provided for convenience and customs purposes. The written description of the scope of the antidumping duty order is dispositive.

Comparisons to Normal Value

Pursuant to section 773(a)(1)(B) of the Act and 19 CFR 351.414(c)(1) and (d), to determine whether Nan Ya’s sales of subject merchandise from Taiwan to the United States were made at less than NV, the Department compared the export price (EP) to the NV as described in the “Export Price” and “Normal Value” sections of this memorandum.

A. Determination of Comparison Method

Pursuant to 19 CFR 351.414(b) and (c)(1), the Department calculates dumping margins by comparing weighted-average NVs to weighted-average EPs (or constructed export prices (CEP)) (the average-to-average method) unless the Secretary determines that another method is appropriate in a particular situation. In less-than-fair-value investigations, the Department examines whether to compare weighted-average NVs to the EP or CEP of individual U.S. sales (the average-to-transaction method) as an alternative comparison method using an analysis consistent with section 777A(d)(1)(B) of the Act. Although section 777A(d)(1)(B) of the Act does not strictly govern the Department’s examination of this question in the context of administrative reviews, the Department nevertheless finds that the issue arising under 19 CFR 351.414(c)(1) in administrative reviews is, in fact, analogous to the issue in antidumping duty

\textsuperscript{10} See Memorandum “Polyethylene Terephthalate Film, Sheet and Strip from Taiwan: Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review – 2015-2016,” dated March 7, 2017.

\textsuperscript{11} See Memorandum “Polyethylene Terephthalate Film from Taiwan: Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review – 2015-2016,” dated June 30, 2017.
investigations. In recent proceedings, the Department applied a “differential pricing” analysis for determining whether application of average-to-transaction comparisons is appropriate in a particular situation pursuant to 19 CFR 351.414(c)(1) and consistent with section 777A(d)(1)(B) of the Act. The Department finds that the differential pricing analysis used in those recent proceedings may be instructive for purposes of examining whether to apply an alternative comparison method in this administrative review. The Department will continue to develop its approach in this area based on comments received in this and other proceedings, and on the Department’s additional experience with addressing the potential masking of dumping that can occur when the Department uses the average-to-average method in calculating weighted-average dumping margins.

The differential pricing analysis used in these preliminary results requires a finding of a pattern of EPs (or CEPs) for comparable merchandise that differs significantly among purchasers, regions, or time periods. If such a pattern is found, then the differential pricing analysis evaluates whether such differences can be taken into account when using the average-to-average method to calculate the weighted-average dumping margin. The differential pricing analysis used here evaluates all purchasers, regions, and time periods to determine whether a pattern of prices that differ significantly exists. The analysis incorporates default group definitions for purchasers, regions, time periods, and comparable merchandise. For the respondent, purchasers are based on the reported customer codes for Nan Ya. Regions are defined using the reported destination code (i.e., zip code) and are grouped into regions based upon standard definitions published by the U.S. Census Bureau. Time periods are defined by the quarter within the POR being examined based upon the reported date of sale. For purposes of analyzing sales transactions by purchaser, region and time period, comparable merchandise is considered using the product control number and any characteristics of the sales, other than purchaser, region and time period, that the Department uses in making comparisons between EP (or CEP) and NV for the individual dumping margins.

In the first stage of the differential pricing analysis used here, the “Cohen’s d test” is applied. The Cohen’s d test is a generally recognized statistical measure of the extent of the difference between the mean of a test group and the mean of a comparison group. First, for comparable merchandise, the Cohen’s d coefficient is calculated when the test and comparison groups of data each have at least two observations, and when the sales quantity for the comparison group accounts for at least five percent of the total sales quantity of the comparable merchandise. Then, the Cohen’s d coefficient is used to evaluate the extent to which the net prices to a

particular purchaser, region or time period differ significantly from the net prices of all other sales of comparable merchandise. The extent of these differences can be quantified by one of three fixed thresholds defined by the Cohen’s $d$ test: small, medium or large. Of these thresholds, the large threshold provides the strongest indication that there is a significant difference between the means of the test and comparison groups, while the small threshold provides the weakest indication that such a difference exists. For this analysis, the difference was considered significant, and the sales in the test group were found to have passed the Cohen’s $d$ test, if the calculated Cohen’s $d$ coefficient is equal to or exceeds the large (i.e., 0.8) threshold.

Next, the “ratio test” assesses the extent of the significant price differences for all sales as measured by the Cohen’s $d$ test. If the value of sales to purchasers, regions, and time periods that passes the Cohen’s $d$ test accounts for 66 percent or more of the value of total sales, then the identified pattern of prices that differ significantly supports the consideration of the application of the average-to-transaction method to all sales as an alternative to the average-to-average method. If the value of sales to purchasers, regions, and time periods that passes the Cohen’s $d$ test accounts for more than 33 percent and less than 66 percent of the value of total sales, then the results support consideration of the application of an average-to-transaction method to those sales identified as passing the Cohen’s $d$ test as an alternative to the average-to-average method, and application of the average-to-average method to those sales identified as not passing the Cohen’s $d$ test. If 33 percent or less of the value of total sales passes the Cohen’s $d$ test, then the results of the Cohen’s $d$ test do not support consideration of an alternative to the average-to-average method.

If both tests in the first stage (i.e., the Cohen’s $d$ test and the ratio test) demonstrate the existence of a pattern of prices that differ significantly such that an alternative comparison method should be considered, then in the second stage of the differential pricing analysis, we examine whether using only the average-to-average method can appropriately account for such differences. In considering this question, the Department tests whether using an alternative method, based on the results of the Cohen’s $d$ and ratio tests described above, yields a meaningful difference in the weighted-average dumping margin as compared to that resulting from the use of the average-to-average method only. If the difference between the two calculations is meaningful, this demonstrates that the average-to-average method cannot account for differences such as those observed in this analysis, and, therefore, an alternative method would be appropriate. A difference in the weighted-average dumping margins is considered meaningful if: (1) there is a 25 percent relative change in the weighted-average dumping margin between the average-to-average method and the appropriate alternative method when both results are above the de minimis threshold, or (2) the resulting weighted-average dumping margin moves across the de minimis threshold.

Interested parties may present arguments and justifications in relation to the above-described differential pricing approach used in these preliminary results, including arguments for modifying the group definitions used in this proceeding.
B. Results of the Differential Pricing Analysis

For Nan Ya, based on the results of the differential pricing analysis, the Department preliminarily finds that the value of all U.S. sales passing the Cohen’s $d$ test is 59.92 percent, such that we should consider as a mixed alternative comparison method applying the average-to-average method to U.S. sales not passing the Cohen’s $d$ test, and the average-to-transaction method to sales passing the Cohen’s $d$ test.\(^{15}\) The results of the differential pricing analysis further indicates there is a meaningful difference between the weighted-average dumping margins calculated using the average-to-average method and the alternative method, \textit{i.e.}, the resulting weighted-average dumping margin moves across the \textit{de minimis} threshold.\(^{16}\) Accordingly, the Department preliminarily determines to use the mixed alternative method to calculate the weighted-average margin of dumping for Nan Ya.

Product Comparisons

In accordance with section 771(16) of the Act, we compared prices for products sold in the U.S. market with prices for products sold in the home market which were either identical or most similar in terms of the physical characteristics. In the order of importance, these physical characteristics are grade, specification, thickness, thickness category, and surface treatment. Where there were no sales of identical merchandise in the home market to compare to U.S. sales, we compared U.S. sales to the most similar foreign like product based on the characteristics listed above.

Date of Sale

Section 351.401(i) of the Department’s regulations states that, in identifying the date of sale of the merchandise under consideration or foreign like product, the Secretary normally will use the date of invoice, as recorded in the exporter or producer’s records kept in the ordinary course of business. Additionally, under that regulation, the Secretary may use a date other than the date of invoice if the Secretary is satisfied that a different date better reflects the date on which the exporter or producer establishes the material terms of sale.\(^{17}\) In addition, the Department’s longstanding practice is to rely on shipment date where it precedes invoice date as the date of sale.\(^{18}\)

\(^{15}\) See Memorandum “Analysis Memorandum for the Preliminary Results of the Antidumping Duty Administrative Review of Polyethylene Terephthalate Film, Sheet, and Strip from Taiwan: Nan Ya Plastics Corporation (Nan Ya),” dated concurrently with this memorandum (Nan Ya Preliminary Analysis Memorandum).

\(^{16}\) Id.

\(^{17}\) See 19 CFR 351.401(i); see also Allied Tube & Conduit Corp. v. United States, 132 F. Supp. 2d 1087, 1090-1092 (CIT 2001) (\textit{Allied Tube & Conduit Corp.} (“As elaborated by Department practice, a date other than invoice date ‘better reflects’ the date when ‘material terms of sale’ are established if the party shows that the ‘material terms of sale’ undergo no meaningful change (and are not subject to meaningful change) between the proposed date and the invoice date.”).

\(^{18}\) See, e.g., Seamless Refined Copper Pipe and Tube From Mexico: Final Results of Antidumping Duty Administrative Review; 2012-2013, 80 FR 33482 (June 12, 2015) (“Copper Pipe and Tube From Mexico”), and accompanying Issues and Decision Memorandum at Comment 1; Notice of Final Determination of Sales at Less Than Fair Value and Negative Final Determination of Critical Circumstances: Certain Frozen and Canned Warmwater Shrimp From Thailand, 69 FR 76918 (December 23, 2004), and accompanying Issues and Decision Memorandum at Comment 10.
Therefore, we preliminarily used the earlier of the invoice date or the shipment date as the date of sale in both markets, in accordance with our practice.\(^{19}\)

In the instant review, as in the most recently completed review, Nan Ya stated the date of shipment from the factory (what Nan Ya refers to as the delivery note date) as the date of sale for both its home market and U.S. sales.\(^{20}\) Information on the record indicates that in the home market, Nan Ya issues its invoice on the same day that it ships the merchandise.\(^{21}\) Therefore, because information on the record supports the shipment and invoice date being the same, pursuant to 19 CFR 351.401(i) we are preliminarily using invoice date as the date of sale in the home market.

For the U.S. market, Nan Ya stated the commercial invoice is issued a few days after shipment of the merchandise.\(^{22}\) Therefore, consistent with the Department’s regulation 19 CFR 351.401(i) and the Department’s practice as noted above, we have preliminarily used the invoice date for Nan Ya’s U.S. sales, or the shipment date if the shipment date preceded the invoice date.\(^{23}\)

**Export Price**

For sales to the United States, the Department calculated EP in accordance with section 772(a) of the Act because the merchandise was sold prior to importation by the exporter or producer outside the United States to the first unaffiliated purchaser in the United States. We calculated EP based on packed prices to customers in the United States. We made deductions from U.S. price for domestic inland freight from plant to port of exportation, brokerage and handling charges incurred in the country of manufacture, trade promotion fee, and marine insurance, in accordance with section 772(c)(2)(A) of the Act.

**Normal Value**

A. Home Market Viability as Comparison Market

To determine whether there was a sufficient volume of sales of PET film in the home market to serve as a viable basis for calculating NV, the Department compared the volume of the

\(^{22}\) *See* Nan Ya’s Section C QR dated December 5, 2016 at C-50.

\(^{23}\) *See also, e.g.*, Non-Oriented Electrical Steel From the Republic of Korea: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Negative Preliminary Determination of Critical Circumstances, and Postponement of Final Determination, 79 FR 29426 (May 22, 2014) and accompanying Decision Memorandum at 16, unchanged at Non-Oriented Electrical Steel From the Republic of Korea: Final Determination of Sales at Less Than Fair Value and Negative Final Determination of Critical Circumstances, 79 FR 61612 (October 14, 2014) (“As the information on the record indicates that the material terms of sale…could change until the date of shipment or invoice, where applicable, for both U.S. and comparison market sales, for purposes of this preliminary determination, we used the date of shipment (if earlier than the date of invoice) or the date of invoice as the date of sale for POSCO’s reported U.S. and comparison market sales.”).
respondent’s home market sales of the foreign like product to their volume of U.S. sales of the subject merchandise in accordance with section 773(a) of the Act. Pursuant to section 773(a)(1)(B) of the Act, because its aggregate volume of home market sales of the foreign like product was greater than five percent of its aggregate volume of U.S. sales of the subject merchandise, we determined that the home market was viable for comparison purposes for Nan Ya.

B. Level of Trade

In accordance with section 773(a)(1)(B) of the Act and the Statement of Administrative Action accompanying the Uruguay Round Agreements Act,24 to the extent practicable, the Department determines NV based on sales in the comparison market at the same level of trade (LOT) as the EP. Pursuant to 19 CFR 351.412(c)(1), the NV LOT is based on the starting price of the sales in the comparison market or, when NV is based on constructed value (CV), the starting price of the sales from which we derive the adjustments to CV for selling expenses and profit. For EP sales, the U.S. LOT is based on the starting price of the sales in the U.S. market, which is usually from the exporter to the importer.

To determine whether comparison market sales are at a different LOT than EP sales, we examine stages in the marketing process and selling functions along the chain of distribution between the producer and the unaffiliated customer.25 If the comparison market sales are at a different LOT and the difference affects price comparability, as manifested in a pattern of consistent price differences between the sales on which NV is based and the comparison market sales at the LOT of the export transaction, we make a LOT adjustment under section 773(a)(7)(A) of the Act.

Nan Ya reported that it sold to end-users and distributors in its home market, and that most of its selling functions were performed at the same or similar levels of intensity in both channels of distribution.26 Because the selling activities to Nan Ya’s customers did not vary for sales in the home market through its two channels of distribution, we preliminarily determine that there is one LOT in the home market. Similarly, Nan Ya reported two channels of distribution in the U.S. market for sales made to importers and end user. However, the selling functions performed in both these reported channels were at the same or similar levels of intensity, and therefore, we preliminarily determine that there is one LOT in the U.S. market.27

Nan Ya also provided the Department with information on its selling activities in the home and U.S. markets.28 We find that Nan Ya provided mostly similar level of customer support services on their U.S. sales (all of which were EP) as it did on its home market sales, and that the minor differences that do exist do not establish a distinct and separate LOT. Thus, we determine that for Nan Ya, the EP and the starting price of home market sales represent the same stage in the marketing process, and are, thus, at the same LOT. For this reason, we preliminarily find that a

25 See 19 CFR 351.412(c)(2).
26 See Nan Ya’s Section A response of November 7, 2016 at A-10 to A-12, Exhibit A-3.a, and Exhibit A-3.c.
27 Id. at Exhibit A-3.a.
28 Id. at Exhibit A-3.c.
LOT adjustment for Nan Ya is not warranted. As there are no CEP sales, no CEP offset is appropriate.

C. Cost of Production Analysis

On June 29, 2015, the President of the United States signed into law the Trade Preferences Extension Act of 2015 (TPEA), which made numerous amendments to the AD and countervailing duty law, including amendments to section 773(b)(2) of the Act, regarding the Department’s requests for information on sales at less than cost of production. The 2015 law does not specify dates of application for those amendments. On August 6, 2015, the Department published an interpretative rule, in which it announced the applicability dates for each amendment to the Act, except for amendments contained to section 771(7) of the Act, which relate to determinations of material injury by the ITC. Section 773(b)(2)(A)(ii) of the Act controls all determinations in which the complete initial questionnaire has not been issued as of August 6, 2015. It requires the Department to request constructed value and cost of production information from respondent companies in all AD proceedings. Accordingly, the Department requested this information from Nan Ya. We preliminarily determine that Nan Ya in fact made sales in the home market during the POR that were below the costs of production (COP) in its home market.

1. Calculation of Cost of Production

We calculated the COP on a product-specific basis, based on the sum of the respondent’s costs of materials and fabrication for the foreign like product plus amounts for general and administrative expenses, interest expenses, and the costs of all expenses incidental to preparing the foreign like product for shipment in accordance with section 773(b)(3) of the Act.

We relied on Nan Ya’s COP data submitted in its questionnaire response to the Department’s original and supplemental questionnaire, except as follows:

- We reset Nan Ya’s reported interest expense to zero.
- We made major input adjustments to Nan Ya’s reported costs for purchases of ethylene glycol and purified terephthalic acid.

2. Test of Comparison Market Sales Prices

On a product-specific basis, we compared the adjusted weighted-average COP for the POR to the per-unit price of the comparison market sales of the foreign like product to determine whether these sales by Nan Ya had been made at prices below the COP. In particular, in determining

31 Id., 80 FR 46794-95.
32 The 2015 amendments may be found at https://www.congress.gov/bill/114th-congress/house-bill/1295/text/pl; see also Letter from the Department to Nan Ya, dated October 13, 2016 (Nan Ya’s Initial Questionnaire).
33 See Nan Ya’s Supplemental Questionnaire Response of April 25, 2017 for the revised COP dataset. See also Nan Ya Preliminary Analysis Memorandum.
whether to disregard home market sales made at prices below their COP, we examined whether such sales were made within an extended period of time in substantial quantities and at prices which permitted the recovery of all costs within a reasonable period of time, in accordance with section 773(b) of the Act.\textsuperscript{34} We determined the net comparison market prices for the below-cost test by adjusting the gross unit price for all applicable movement charges, discounts, rebates, billing adjustments, direct and indirect selling expenses, and packing expenses excluding all adjustments for imputed expenses.\textsuperscript{35}

3. Results of the Cost of Production Test

Pursuant to section 773(b)(2)(C)(i) of the Act, where less than 20 percent of sales of a given product were at prices less than the COP, we did not disregard below-cost sales of that product because we determined that the below-cost sales were not made in substantial quantities. Where 20 percent or more of the respondent’s home market sales of a given product were at prices less than the COP, we disregarded the below-cost sales because: (1) they were made within an extended period of time in substantial quantities in accordance with sections 773(b)(2)(B) and (C) of the Act, and (2) based on our comparison of prices to the weighted average of the COPs, they were at prices which would not permit the recovery of all costs within a reasonable period of time in accordance with section 773(b)(2)(D) of the Act. Because we are applying our standard annual weighted-average cost methodology in these preliminary results, we also applied our standard cost-recovery test with no adjustments.

Our cost test for Nan Ya indicated that for home market sales of certain products, more than 20 percent were sold at prices below the COP within an extended period of time, and were at prices which would not permit the recovery of all costs within a reasonable period of time. Thus, in accordance with section 773(b)(1) of the Act, we disregarded these below-cost sales in our analysis as outside of the ordinary course of trade and used the remaining sales to determine NV.\textsuperscript{36}

E. Calculation of Normal Value Based on Comparison Market Prices

We based NV on the starting prices of Nan Ya’s sales to unaffiliated home market customers, pursuant to sections 773(a)(1)(A) and 773(a)(1)(B)(i) of the Act and, where appropriate, made deductions from NV for movement expenses (i.e., inland freight) in accordance with section 773(a)(6)(B)(ii) of the Act. In accordance with 19 CFR 351.401(c), we made adjustments for discounts and rebates. Pursuant to section 773(a)(6)(C)(iii) of the Act and 19 CFR 351.410, we made, where appropriate, circumstance-of-sale adjustments (i.e., credit and warranty expenses). When applicable, we also made adjustments in accordance with 19 CFR 351.410(e), for indirect selling expenses incurred on comparison-market or U.S. market sales where commissions were granted on sales in one market but not the other. Specifically, where commissions were granted in the U.S. market but not in the comparison market, we made a downward adjustment to NV for the lesser of (1) the amount of the commission paid in the U.S. market, and (2) the amount of indirect selling expenses incurred in the comparison market. If commissions were granted in the

\textsuperscript{34} See Preliminary Analysis Memorandum.

comparison market but not in the U.S. market, we made an upward adjustment to NV following the same method. We also made adjustments for differences in domestic and export packing expenses in accordance with sections 773(a)(6)(A) and 773(a)(6)(B)(i) of the Act.  

When comparing U.S. sale prices with NVs based on comparison market sale prices of similar, but not identical, merchandise, we also made adjustments for physical differences in merchandise in accordance with section 773(a)(6)(C)(ii) of the Act and 19 CFR 351.411.  We based this adjustment on the difference in the variable cost of manufacturing for the foreign like products and the subject merchandise.  

Currency Conversion

We made currency conversions into U.S. dollars in accordance with section 773A of the Act and 19 CFR 351.415, based on the exchange rates in effect on the dates of the U.S. sales as certified by the Federal Reserve Bank.  The exchange rates are available on the Enforcement and Compliance web site at http://enforcement.trade.gov/exchange/index.html.  

Recommendation

We recommend applying the above methodology for these preliminary results.
